## Command Line Interface

---

The command line interface allows you to communicate with the package and perform basic functions such as:

- Populate the database: `python3 -m bio2bel_msig populate`. By default the database is reset every time is populated. However, another optional parameter “`-reset-db=False`”, allows you to avoid the reset. More logging can be activated by added “`-vv`” or “`-v`” as an argument.
- Drop the database: `python3 -m bio2bel_msig drop`. More logging can be activated by added “`-vv`” or “`-v`” as an rgument.
- Export gene sets as an excel file: `python3 -m bio2bel_msig export`.

## CHAPTER 2

---

Manager

---

## CHAPTER 3

---

Models

---

## CHAPTER 4

---

### Constants

---

Constant module. Define here the link of the gene set gmt file to populate the database.

# CHAPTER 5

---

Web

---

## CHAPTER 6

---

### Indices and tables
